

A (Ace) Servo for the Next Generation MINAS A4 Series

Advanced Gain Tuning

- Further Evolution in Real-Time Auto-Gain Tuning.

Agile and Intelligent

- Improved Damping Control handles all types of machines, from low to high stiffness machines with simple but solid operation.

Almighty

- Position Control, Velocity Control and Torque Control in one Driver supports multiplicity of application.

Amazingly slim size

- Another Evolution in down-sizing, by 25% in size. (compared to A-series)

Details of Features

1. Further Adjustment-Free Operation

High-functionality Real-Time Auto-Gain Tuning

- Corresponds to even variation of load inertia. Offers real automatic gain tuning to low and high stiffness machines with a combination of an adaptive filter.
- Supports the vertical axis application where the load torque is different in rotational direction.
- Prevents the machine from over-traveling during automatic gain tuning with over-travel detecting function.
- Enables you to set and check while monitoring real-time automatic gain tuning conditions on the front panel.

2. Further High-Speed and High-Response

Velocity response (bandwidth) of 1kHz

- Implementation of Instantaneous Velocity Observer realizes a detection of motor speed with higher speed and higher resolution.

*) In case of high stiffness machine

High-functionality Real-Time Auto-Gain Tuning

- Supports the low stiffness machine of belt-driven and the high stiffness machine of short stroke ball screw driven, and enables to realize high-speed positioning with high-functionality real-time auto-gain tuning.

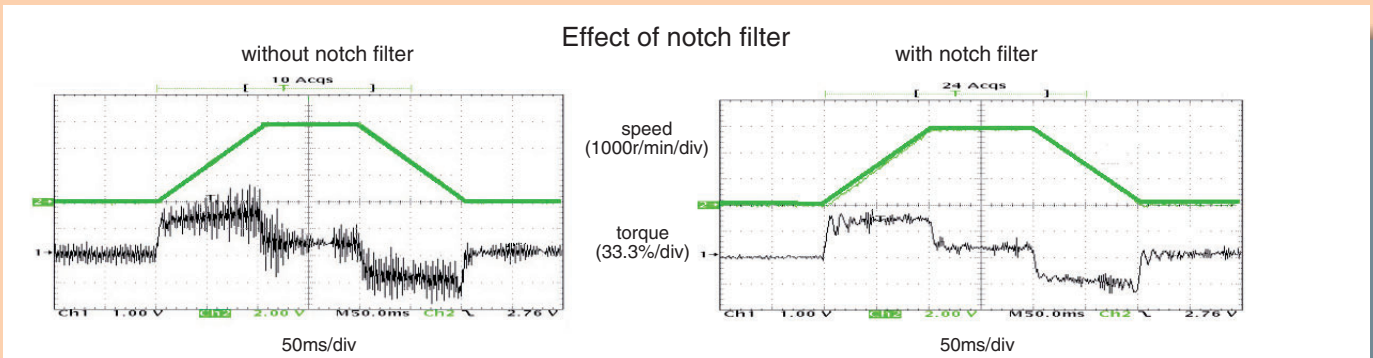

3. Further Reduction of Vibration

Adaptive filter

- Makes the notch filter frequency automatically follow the machine resonance frequency.
- Suppression of "Judder" noise of the machine can be expected which is caused by variation of the machines or resonance frequency due to aging.

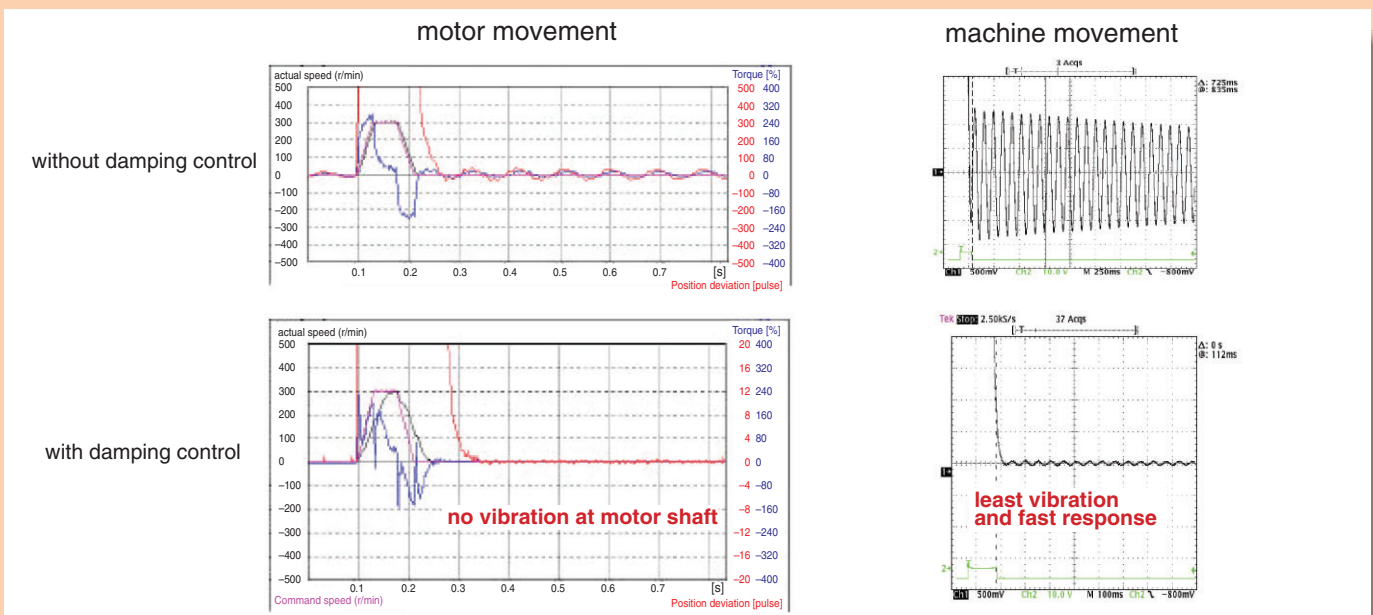

2-channel notch filters

- 2-channel notch filters are equipped in the driver independent from adaptive filter.
- You can set up both frequency and width for each of 2 filters, and set up frequency in unit of 1Hz.
- Suppression of "Judder" noise of the machine which has multiple resonance points can be expected

Damping control

- 2-channel damping filters are equipped in this driver. You can suppress vibration occurring at both starting and stopping in low stiffness machine, by manually setting up vibration frequency in 0.1Hz unit.
- You can also switch the vibration frequency set by 2-channel with rotating direction or with an external input to correspond to the variation of vibration frequency caused by the machine position.
- Easy setup with entry of only frequency and filter value. Improper setup values do not result in unstable operation

4. Further Flexibility and Multiplicity

Setup support with substantial monitoring function

- Faster communication speed of RS232/RS485 (Max.57600bps) establishes an easy and comfortable operating condition for setup support software, "PANATERM".
 - Displays the factors of no-motor run and helps you to analyze the causes of troubles.
 - You can set up the panel operation lock to inhibit the operation from the front panel, thus enables you to prevent miss-operation such as unintentional change of parameters.
- *Note) Refer to page "F2" for setup support software.

Command control modes

- Offers you "Position", "Velocity (including internal 8-speed)" and "Torque" command control modes
- You can set up any one of the command control modes, or selectable two command control mode with parameter.
- You can set up any command control mode depending on your application.

Monitoring function with front panel

- LED display and analog monitor terminals are installed in the front panel.
- Displays "Motor speed", "Motor torque" Position deviation", "Motor load factor" and "Regeneration load factor" on LED.
- You can monitor "Motor speed", "Motor torque" and "Position deviation" through analog monitor terminals.

Trial run (JOG)

- Features the function for trial (JOG) run through the front panel or console (option) without connecting to a host controller.
- You can shorten the machine setup time.

Full-closed control (High precision positioning)

- Features the full-closed control of position and velocity, using the signals from feedback scale installed on the load side and high resolution encoder.

Note) Applicable feedback scales are as follows,

- Made by Mitsutoyo

	Resolution(μm)	Max. Speed*(m/s)
ABS AT573A Series	0.05	2
ABS ST771A Series	0.5	5
ABS ST773A Series	0.1	4
ABS ST771AL Series	0.5	5
ABS ST773AL Series	0.1	4

- Made by Sony Manufacturing System

	Resolution(μm)	Max. Speed*(m/s)
SR77 Series	0.05	2
SR87 Series	0.05	2

High resolution laser scales are also available.

(* The maximum speed depends on the driver performance.
(It is limited by the machine configuration and system configuration.)

- Best suits to high precision machines.

Inrush current suppressing function

- Inrush current suppressing resistor is equipped in this driver, which prevents the circuit breaker shutdown of the power supply caused by inrush current at power-on.
- Prevents unintentional shutdown of the power supply circuit breaker in multi-axes application and does not give load to the power line.

Regeneration discharging function

- Discharges the regenerative energy with resistor, which energy is generated while stopping the load with large moment of inertia, or use in up-down operation, and is returned to the driver from the motor.
- No regeneration discharge resistor is built-in to Frame A driver (MADDT1105 type.), Frame B driver (MBDDT2210 type.) and Frame G driver (MGDDTC3B4 type.) and we recommend you to connect optional regenerative resistor.
- Regenerative resistor is built-in to Frame C to F drivers, however, connection of the optional regenerative resistor bring you further regenerative capability.

Built-in dynamic brake

- You can select the dynamic brake action which short the servo motor windings of U, V and W, at Servo-OFF, CW/CCW over-travel inhibition, power shutdown and trip.
- You can select the action sequence setup depending on the machine requirement.

Positioning pulse

- Corresponds up to 2Mpps of pulse input at positioning control.

Setup support software

- With the setup support software, "PANATERM" via RS232/RS485 communication port, you can monitor the running status of the driver and set up parameters.
- You can read out the absolute position data of the motor with absolute encoder.

Wave-form graphic function

- With the setup support software, "PANATERM", you can monitor the "Command speed", "Actual speed", "Torque", "Position deviation" and "Positioning complete signal".
 - Helps you to analyze the machine and shorten the setup time
- *Note) Refer to page "F2" for setup support software.

Torque limit value switching

- You can setup 2 torque limits and use them for tension control or press & hold control.
- It is possible to apply it to bumping homing.

SEMI F47 voltage sag immunity

- Features the function which complies to voltage sag immunity standard of SEMI F47 at no load or light load.
- Useful for semiconductor industry.

Notes)

- 1) Not applicable to single phase, 100V type.
- 2) Verify with the actual machine condition to F47, voltage sag immunity standard.

Frequency analyzing function

- You can confirm the response frequency characteristics of total machine mechanism including the servo motor with the setup support software, "PANATERM"
 - Helps you to analyze the machine and shorten the setup time
- *Note) Refer to page "F2" for setup support software.

Wiring example

Driver Frame Type Symbol (Frame A, B, C, D)

For details, refer to the Instruction Manual.

● Wiring of main circuit

Circuit Breaker (NFB)

Protects the power lines.
Shuts off the circuit when overcurrent passes.

Noise Filter (NF)

Prevents external noise from the power lines.
And reduces an effect of the noise generated by the servo driver.

Magnetic Contactor (MC)

Turns on/off the main power of the servo driver.
Surge absorber to be used together with this.

Reactor (L)

Reduces harmonic current of the main power.

Pin RB1, RB2 and RB3 ...

- RB2 and RB3 to be kept shorted for normal operation.
- When the internal regenerative resistor capacity has shortage, disconnect between RB2 and RB3, then connect an external regenerative resistor between RB1 and RB2. (Note: that no regenerative resistor is equipped in Frame A and B type.)

Regenerative resistor (option)

Wiring example

Driver Frame Type Symbol (Frame G)

For details, refer to the Instruction Manual.

● Wiring of main circuit

Magnetic Circuit Breaker (MCB)

Used to protect the power lines: overcurrent will shutoff the circuit.

Noise filter (NF)

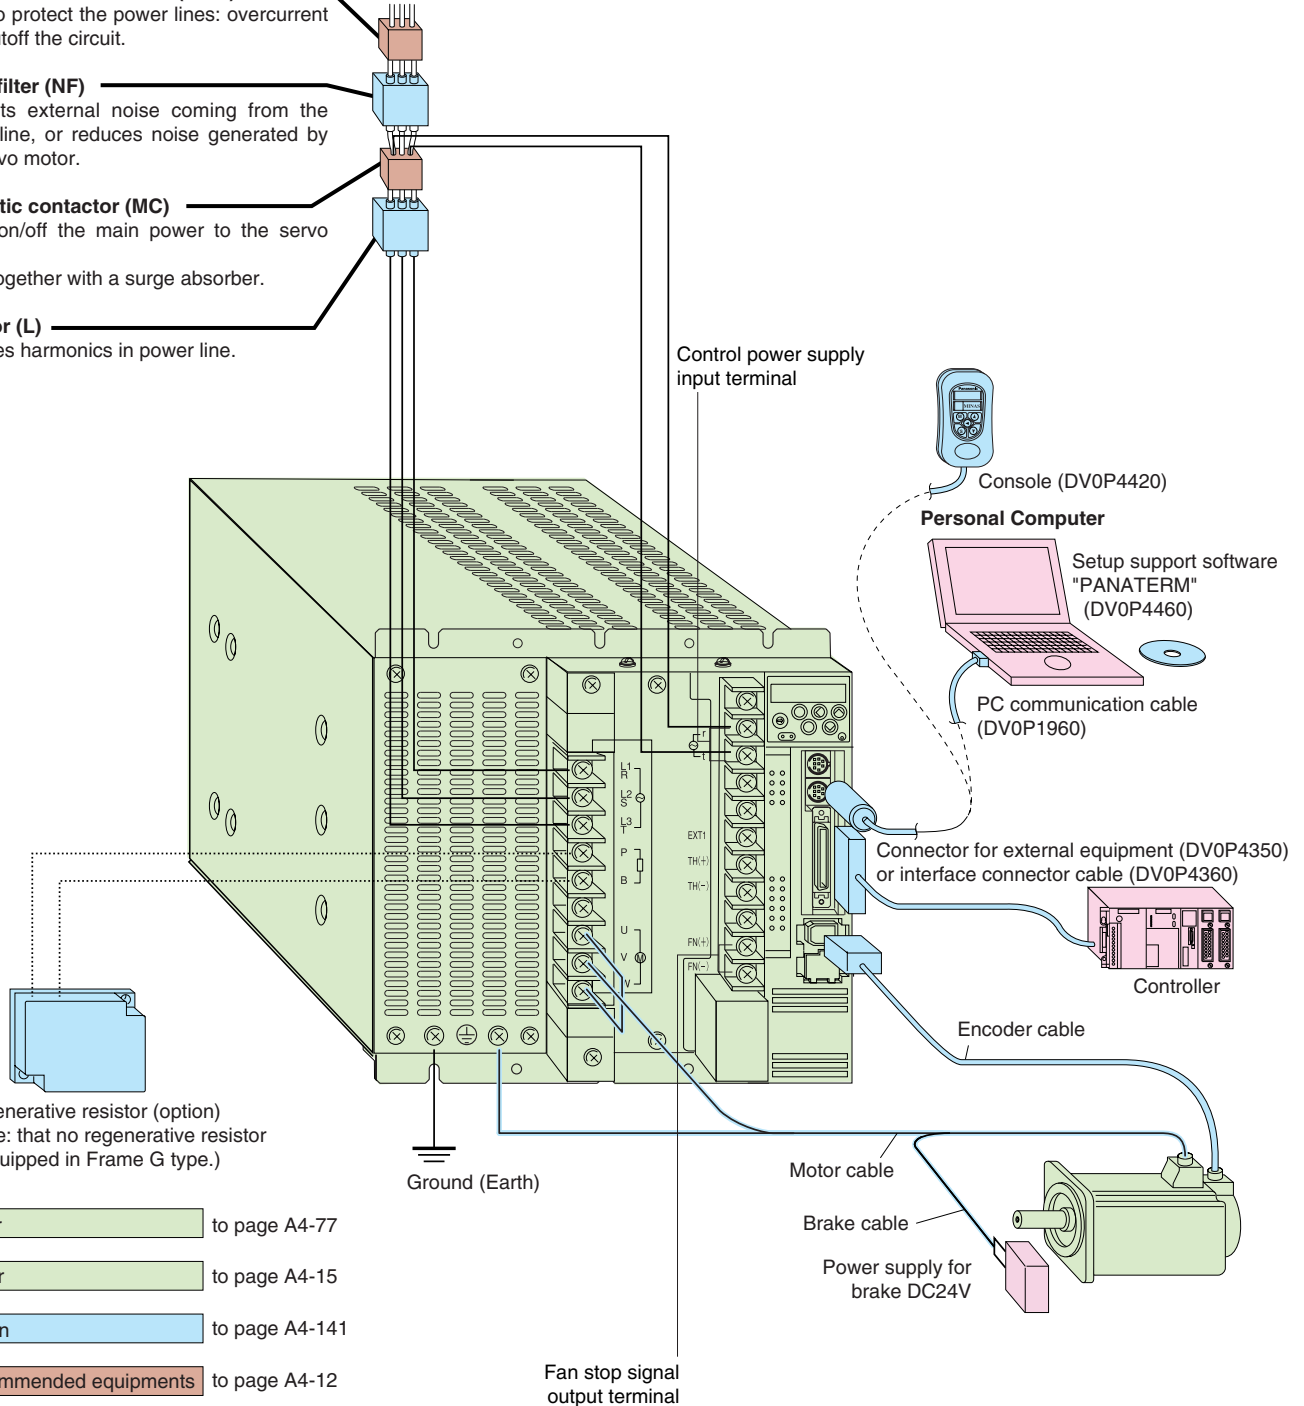

Prevents external noise coming from the power line, or reduces noise generated by the servo motor.

Magnetic contactor (MC)

Turns on/off the main power to the servo motor.
Used together with a surge absorber.

Reactor (L)

Reduces harmonics in power line.

Regenerative resistor (option)
(Note: that no regenerative resistor
is equipped in Frame G type.)

● Select a single and 3-phase common specifications corresponding to the power supplies.

● Listed circuit breaker and magnetic contactor are manufactured by Panasonic Electric Works.

To conform to EC Directives, install a circuit breaker which conforms to IEC and UL Standards (Listed, (UL) marked) between noise filter and power supply without fail.

● For details of noise filter, refer to Page A4-138.

<Remarks>

● Select a circuit breaker and noise filter which match to the capacity of power supply (including a load condition).

● Terminal block and earth terminals

• Use a copper conductor cables with temperature rating of 60°C or higher.

• Earth terminals for Frame A to D are M4 and M5 for Frame E to G.

• Larger tightening torque for screws than the max. value (M4 : 1.2 N·m, M5 : 2.0 N·m) may damage the terminal block.

• Mounting screws on the cover of terminal block for frames E to G and screw on acrylic cover of terminal block for frame G should be tightened with 0.2 N·m torque.

Application of torque larger than 0.2 N·m may damage the thread on the driver.

● Use an earth cable with the same diameter as that of the main circuit cable.

If the diameter of the main circuit cable is 1.6mm² or less, use an earth cable with a diameter of 1.6mm² (AWG14).

● Use the attached exclusive connector for A to D-frame, and maintain the peeled off length of 8 to 9mm.

● Tighten the screws of the connector, CN X5 for the host controller with the torque of 0.3 to 0.35 N·m.

● Larger torque than 0.35N·m may damage the connector at the driver side.

<Caution>

Do not turn on power without first positively tightening all terminal block screws, otherwise, loose contacts may generate heat (smoking, firing).

Note) 1. □ represents the motor structure.

Note) 2. ** represents the cable length (specified value)
For details, refer to cable specifications (A4-141).

Note) 3. 7.5kW output type:1500(r/min)

Common Specifications of Driver

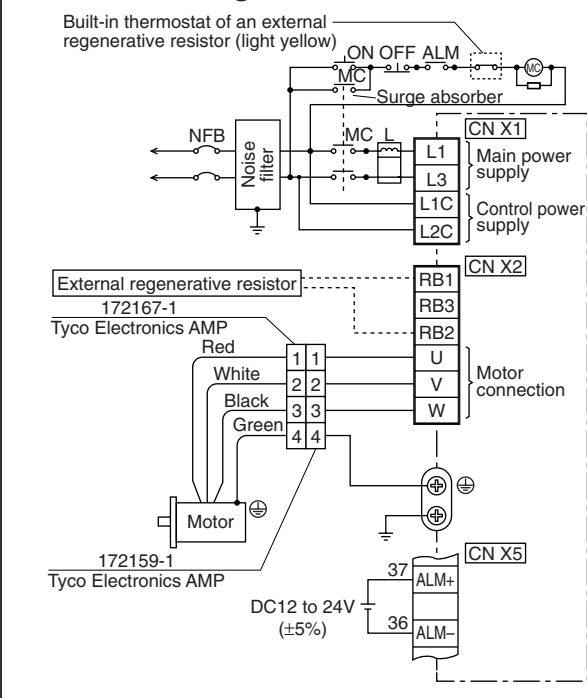

Basic Specifications	Input power	100V	Main circuit		Single phase, 100-115V	+10% -15%	50/60Hz																											
			Control circuit		Single phase, 100-115V	+10% -15%	50/60Hz																											
		200V	Main circuit	Frame A, B	Single phase, 200-240V	+10% -15%	50/60Hz																											
				Frame C, D	Single/3-phase, 200-240V	+10% -15%	50/60Hz																											
				Frame E to G	3-phase, 200-230V	+10% -15%	50/60Hz																											
			Control circuit	Frame A to D	Single phase, 200-240V	+10% -15%	50/60Hz																											
	Frame E to G			Single phase, 200-230V	+10% -15%	50/60Hz																												
	Environment	Temperature		Operating : 0 to 55°C, Storage : -20 to +65°C (Max.temperature guarantee 80°C for 72 hours <Nomal temperature>)																														
		Humidity		Both operating and storage : 90%RH or less (free from condensation)																														
		Altitude		1000m or lower																														
		Vibration		5.88m/s ² or less, 10 to 60Hz (No continuous use at resonance frequency)																														
	Withstand voltage			Should be 1500VAC (Sensed current: 20mA) or higher for 1 minute between Primary and Ground.																														
	Control method			IGBT PWM Sinusoidal wave drive																														
	Encoder feedback			17-bit (131072 resolution) absolute/incremental encoder, 2500P/r (10000 resolution) incremental encoder																														
	Feedback scale (full-closed control only)			<div>Made by Mitsutoyo<table><tr><th></th><th>Resolution(μm)</th><th>Max. 	SR77 Series	0.05	2																															
	SR87 Series	0.05	2																															
	Control signal	Input	10 inputs (1) Servo-ON, (2) Control mode switching, (3) Gain switching/Torque limit switching, (4) Alarm clear Other inputs vary depending on the control mode.																															
		Output	6 outputs (1) Servo alarm, (2) Servo ready, (3) Release signal of external brake (4) Zero speed detection, (5) Torque in-limit. Other outputs vary depending on the control mode.																															
	Analog signal	Input	3 inputs (16Bit A/D : 1 input, 10Bit A/D : 2 inputs)																															
		Output	2 outputs (for monitoring) (1) Speed monitor (Monitoring of actual motor speed or command speed is enabled. Select the content and scale with parameter.), (2) Torque monitor (Monitoring of torque command, [approx. 3V/rated torque]), deviation counter or full-closed deviation is enabled. Select the content or scale with parameter.)																															
	Pulse signal	Input	2 inputs Select the exclusive input for line driver or photo-coupler input with parameter.																															
		Output	4 outputs Feed out the encoder pulse (A, B and Z-phase) or feedback scale pulse (EXA, EXB and EXZ-phase) in line driver. Z-phase and EXZ-phase pulse is also fed out in open collector.																															
	Communication function	RS232	1 : 1 communication to a host with RS232 interface is enabled.																															
		RS485	1 : n communication up to 15 axes to a host with RS485 interface is enabled.																															
	Front panel			(1) 5 keys (MODE, SET, UP, DOWN, SHIFT), (2) LED (6-digit)																														
	Regeneration			Frame A, B, G : no built-in regenerative resistor (external resistor only) Frame C to F : Built-in regenerative resistor (external resistor is also enabled.)																														
	Dynamic brake			Setup of action sequence at Power-OFF, Servo-OFF, at protective function activation and over-travel inhibit input is enabled. * For G is no function.																														
Control mode			Switching among the following 7 mode is enabled, (1) Position control, (2) Velocity control, (3) Toque control, (4) Position/Velocity control, (5) Position/Torque control, (6) Velocity/Torque control and (7) Full-closed control.																															

Functions	Position control	Control input		(1) Deviation counter clear (2) Command pulse inhibition (3) Electronic gear switching (4) Damping control switching
		Control output		(1) Positioning complete (In-position)
		Pulse input	Max. command pulse frequency	Exclusive interface for line driver : 2Mpps, Line driver : 500kpps, Open collector : 200kpps
			Input pulse signal format	Support (1) RS422 line drive signal and (2) Open collector signal from controller.
			Type of input pulse	Differential input. Selectable with parameter, ((1) CW/CCW (2) A and B-phase (3) Command and Direction)
			Electronic gear (Division/Multiplication of command pulse)	Process the command pulse frequency $\times \frac{(1 \text{ to } 10000) \times 2^{(0-17)}}{1 \text{ to } 10000}$ as a position command input
			Smoother filter	Primary delay filter or FIR type filter is selectable to the command input.
		Analog input	Torque limit command input	Individual torque limit for both CW and CCW direction is enabled. (3V/rated torque)
		Instantaneous speed observer		Usable
		Damping control		Usable
	Velocity control	Control input		(1) Speed zero clamp (2) Selection of internal speed setup (3) Gain switching or Torque limit switching input
		Control output		(1) Speed arrival (at-speed)
		Analog input	Velocity command input	Setup of scale and rotational direction of the motor against the command voltage is enabled with parameter, with the permissible max. voltage input = $\pm 10V$ and 6V/rated speed (default setup).
			Torque limit command input	Individual torque limit for both CW and CCW direction is enabled. (3V/rated torque)
		Speed control range		1 : 5000
		Internal speed command		8-speed with parameter setup
		Soft-start/down function		Individual setup of acceleration and deceleration is enabled, with 0 to 10s/1000r/min. S-shaped acceleration/deceleration is also enabled.
		Zero-speed clamp		0-clamp of internal speed command with speed zero clamp input is enabled.
		Instantaneous speed observer		Usable
		Speed command filter		Usable
	Torque control	Control input		(1) Speed zero clamp
		Control output		(1) Speed arrival (at-speed)
		Analog input	Speed command input	Setup of scale and CW/CCW torque generating direction of the motor against the command voltage is enabled with parameter, with the permissible max. voltage input = $\pm 10V$ and 3V/rated speed (default setup).
			Speed limit input	Speed limit input by analog voltage is enabled. Scale setup with parameter.
		Speed limit function		Speed limit value with parameter or analog input is enabled.
	Full-closed control	Control input		(1) Deviation counter clear (2) Command pulse input inhibition (3) Electronic gear switching (4) Damping control switching
		Control output		(1) Full-closed positioning complete (in-position)
		Pulse input	Max. command pulse frequency	Exclusive interface for line driver : 2Mpps, Line driver : 500kpps, Open collector : 200kpps
			Input pulse signal format	Differential input. Selectable with parameter ((1) CCW/CW (2) A and B-phase (3) Command and direction)
			Electronic gear (Division/Multiplication of command pulse)	Process the command pulse frequency $\times \frac{(1 \text{ to } 10000) \times 2^{(0-17)}}{1 \text{ to } 10000}$ as a position command input
			Smoother filter	Primary delay filter is adaptable to the command input.
		Analog input	Torque limit command input	Individual torque limit for both CW and CCW direction is enabled. (3V/rated torque)
		Setup range of division / multiplication of feedback scale		Setting of ratio between encoder pulse (denominator) and feedback scale pulse (numerator) is enabled within a range of $(1 \text{ to } 10000) \times 2^{(0-17)} / (1 \text{ to } 10000)$.
		Auto-gain tuning	Real-time	Corresponds to load inertia fluctuation, possible to automatically set up parameters related to notch filter.
			Normal mode	Estimates load inertia and sets up an appropriate servo gain.
			Fit-gain function	Automatically searches and sets up the value which makes the fastest settling time with external command input.
	Common	Masking of unnecessary input		Masking of the following input signal is enabled. (1) Over-travel inhibition (2) Torque limit (3) Command pulse inhibition (4) Speed-zero clamp (5) Counter clear
		Division of encoder feedback pulse		Set up of any value is enabled (encoder pulses count is the max.).
		Protective function	Soft error	Over-voltage, under-voltage, over-speed, over-load, over-heat, over-current and encoder error etc.
			Hard error	Excess position deviation, command pulse division error, and EEPROM error etc.
		Traceability of alarm data		Traceable up to past 14 alarms including the present one.
		Damping control function		Manual setup with parameter
		Setup	Manual	5push switches on front panel MODE SET ▲ ▼ ◀
			Setup support software	PANATERM (Supporting OS : Windows98, Windows ME, Windows2000, and WindowsXP)

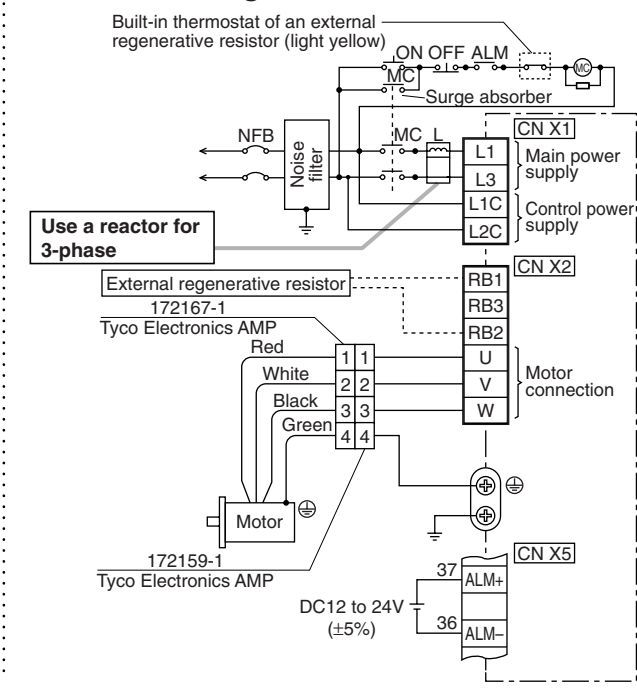

Standard Wiring Example of Main Circuit

● Frame A, B

• In Case of Single Phase, 100V

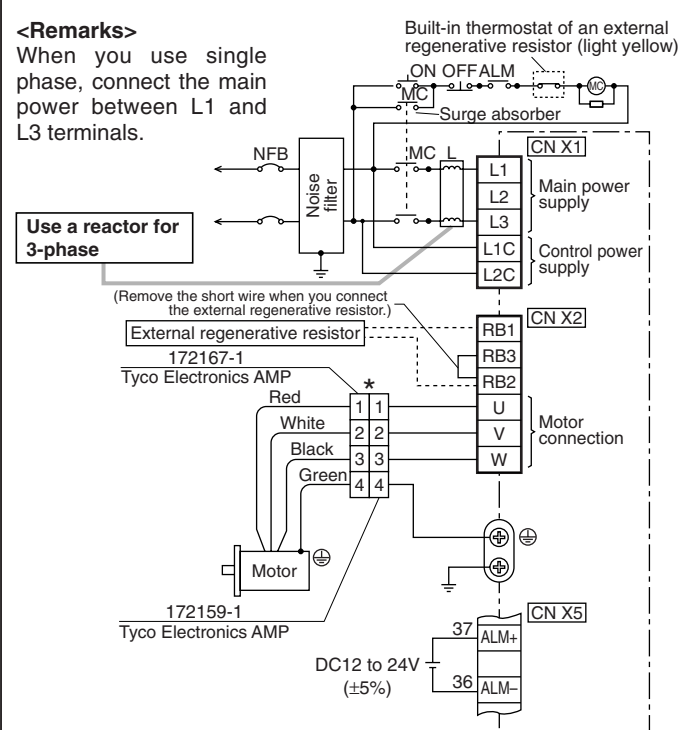

• In Case of Single Phase, 200V

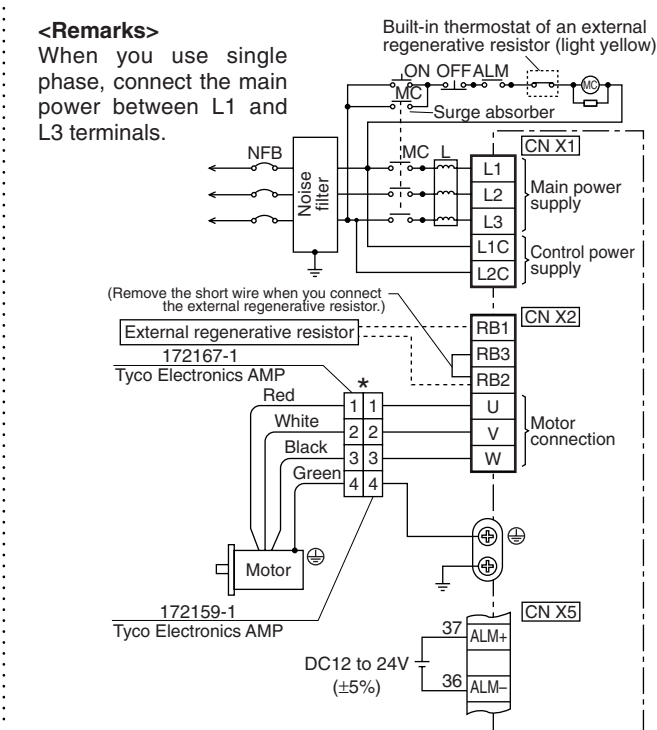

● Frame C, D

• In Case of Single Phase, 200V

• In Case of 3-Phase, 200V

* When you use motor model of MSMA, MDMA, MFMA, MHMA and MGMA, use the connections as the right table shows..

[Motor portion]

Connector :

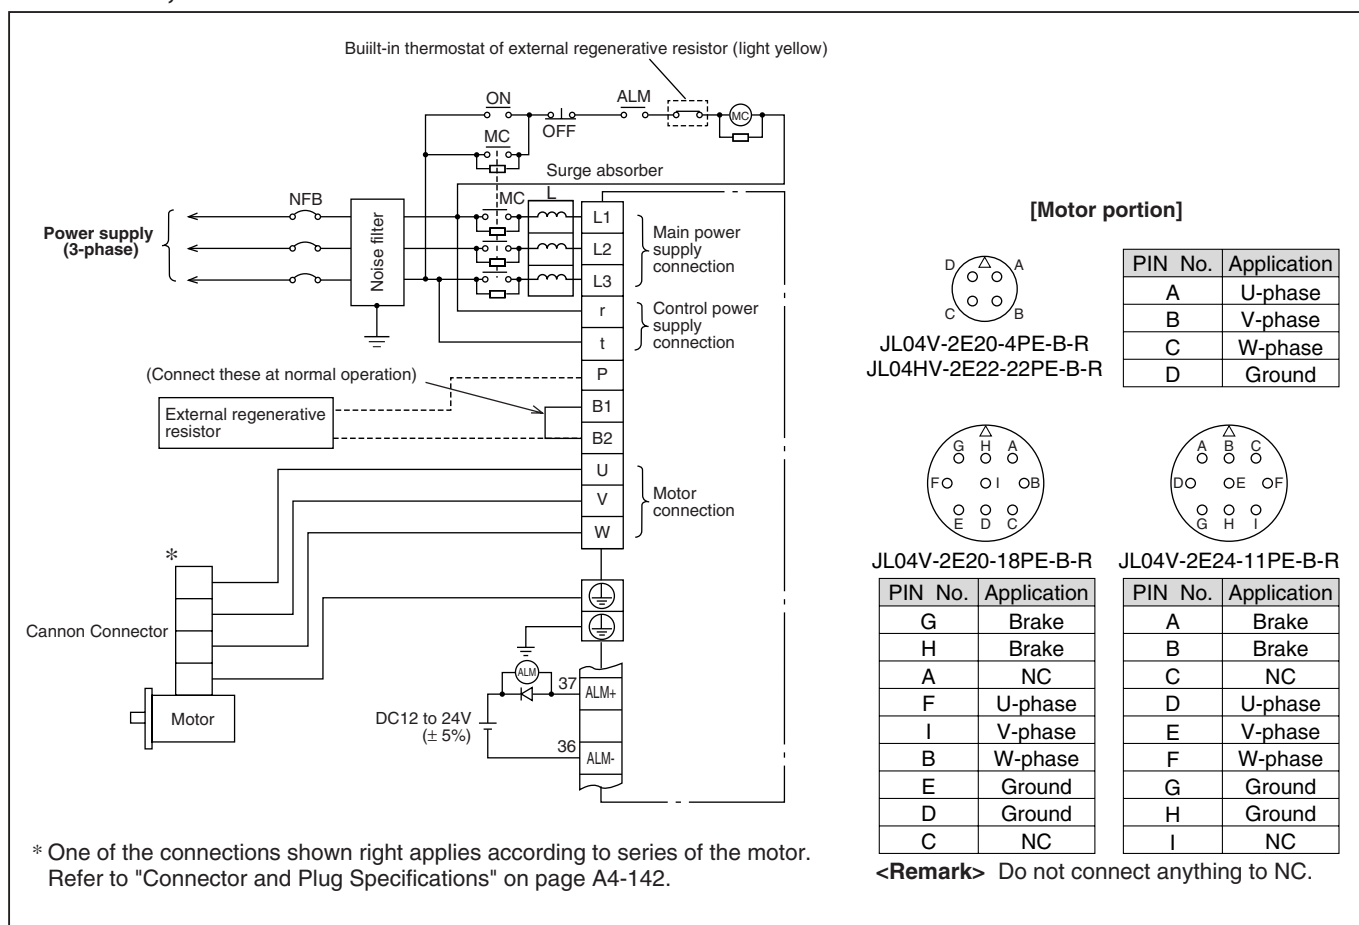

by Japan Aviation Electronics Ind.

<Remark>

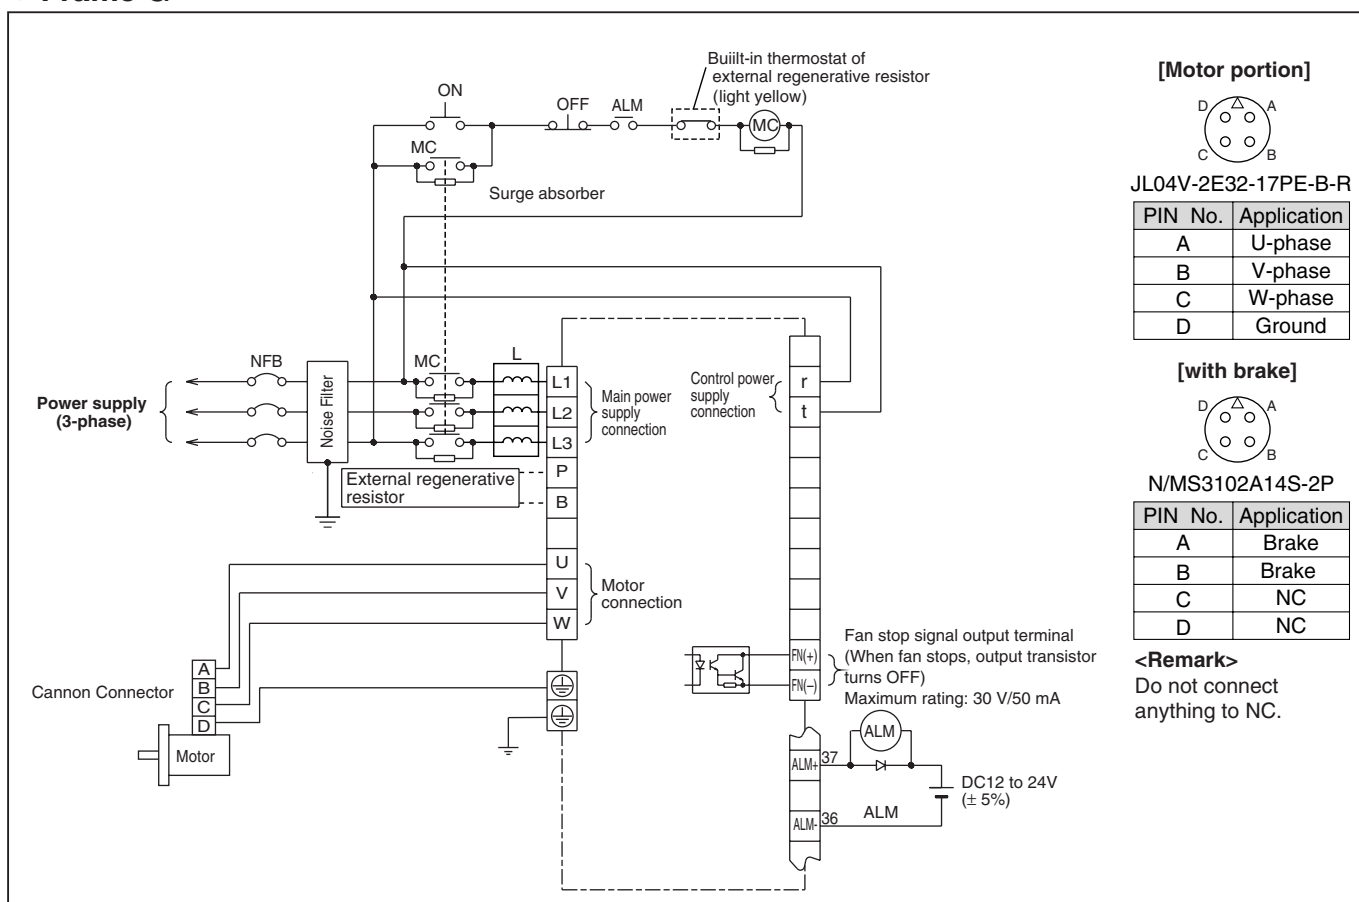

Do not connect anything to NC.

*When you lower the torque limit setup (Pr5E and 5F), running range at high speed might be lowered as well.

- Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.
- If the load is connected, frequency will be defined as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
 - When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
 - Power supply voltage is AC230V (at 200V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.
 - When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
2. If the effective torque is within the rated torque, there is no limit in generative brake.
3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by Ishizuka Electronic or equivalent).
() represents the actually measured value using a diode (200V, 1A or equivalent)

MSMD042□1□

MSMD082□1□

Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.

- If the load is connected, frequency will be defined as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
- When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
- Power supply voltage is AC230V (at 200V of the main voltage).
- If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.
- When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
- 2. If the effective torque is within the rated torque, there is no limit in generative brake.
- 3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
- 4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D271 by Ishizuka Electronic or equivalent).
- () represents the actually measured value using a diode (200V, 1A or equivalent)

MSMA402 □1 □

MSMA502 □1 □

*When you lower the torque limit setup (Pr5E and 5F), running range at high speed might be lowered as well.

Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.

- If the load is connected, frequency will be defined as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
- When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
- Power supply voltage is AC230V (at 200V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.
- When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
- 2. If the effective torque is within the rated torque, there is no limit in generative brake.
- 3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
- 4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by Ishizuka Electronic or equivalent).
() represents the actually measured value using a diode (200V, 1A or equivalent)

*When you lower the torque limit setup (Pr5E and 5F), running range at high speed might be lowered as well.

Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.

- If the load is connected, frequency will be defines as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
 - When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
 - Power supply voltage is AC230V (at 200V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.
 - When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
2. If the effective torque is within the rated torque, there is no limit in generative brake.
3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by Ishizuka Electronic or equivalent).

Symbol	Format	Pulse counts	Resolution	Wires
P	Incremental	2500P/r	10000	5
S	Absolute/Incremental	17-bit	131072	7

Torque characteristics at AC200V of power voltage

(Dotted line represents the torque at 10% less supply voltage.)

MHMA752□1□

*When you lower the torque limit setup (Pr5E and 5F), running range at high speed might be lowered as well.

- Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.
- If the load is connected, frequency will be defined as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
 - When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
 - Power supply voltage is AC230V (at 200V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.
 - When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
2. If the effective torque is within the rated torque, there is no limit in generative brake.
3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by Ishizuka Electronic or equivalent).
() represents the actually measured value using a diode (200V, 1A or equivalent)

MINAS A4, A4F, A4P Series (MSMD) Motors with Gear Reducer

● Motor types with gear reducer

Reduction ratio	Motor output (W)				Type of reducer
	100	200	400	750	
1/5	●	●	●	●	For high precision
1/9	●	●	●	●	
1/15	●	●	●	●	
1/25	●	●	●	●	

Efficiency of the gear reducer show the following inclination in relation to output torque and rotational speed.

● Specifications of motor with gear reducer

Motor type		MSMD
Gear reducer	Backlash	3 minutes or smaller (initial value) at output shaft of the reducer
	Composition of gear	Planetary gear
	Gear efficiency	65% to 85%
	Rotational direction at output shaft (of reducer)	Same direction as the motor output shaft
	Composition of gear	Planetary gear
	Mounting method	Flange mounting
	Permissible moment of inertia of the load (conversion to the motor shaft)	10 times or smaller than rotor moment of inertia of the motor
Environment	Protective structure	IP44 (at gear reducer)
	Ambient temperature	0 to 40°C
	Ambient humidity	85%RH (free from condensation) or less
	Vibration resistance	49m/s ² or less (at motor frame)
	Impact resistance	98m/s ² or less

● Table of motor specifications

Model	Motor	MSMD with gear reducer											
	Motor	Reduction ratio	Output	Rated speed	Max. speed	Rated torque	Peak max. torque	Moment of inertia (motor + reducer/converted to motor shaft)		Mass		Permissible radial load	Permissible thrust load
								w/o brake	w/ brake	w/o brake	w/ brake		
(W)	(W)	(r/min)	(r/min)	(N·m)	(N·m)	J(x 10 ⁻⁴ kg·m ²)	(kg)		(N)	(N)

Upper column : without brake
Lower column : with brake

Conformity to CE and UL

Compliance to EC and EMC Directives

EC Directives

The EC Directives apply to all such electronic products as those having specific functions and have been exported to EU and directly sold to general consumers. Those products are required to conform to the EU unified standards and to furnish the CE marking on the products.

MINAS AC Servos conforms to the EC Directives for Low Voltage Equipment so that the machine incorporating our servos has an easy access to the conformity to relevant EC Directives for the machine.

EMC Directives

MINAS Servo System conforms to relevant standards under EMC Directives setting up certain model (condition) with certain locating distance and wiring of the servo motor and the driver. And actual working condition often differs from this model condition especially in wiring and grounding. Therefore, in order for the machine to conform to the EMC Directives, especially for noise emission and noise terminal voltage, it is necessary to examine the machine incorporating our servos.

Conformed Standards

Subject	Conformed Standard					IEC : International Electrotechnical Commission
Motor	IEC60034-1	IEC60034-5	UL1004	CSA22.2 No.100	Conforms to Low-Voltage Directives	EN : Europäischen Normen
Motor and driver	EN50178	UL508C	CSA22.2 No.14			Standards referenced by EMC Directives
	EN55011	Radio Disturbance Characteristics of Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment			UL : Underwriters Laboratories	
	EN61000-6-2	Immunity for Industrial Environments			CSA : Canadian Standards Association	
	IEC61000-4-2	Electrostatic Discharge Immunity Test			Pursuant to at the directive 2004/108/EC, article 9(2)	
	IEC61000-4-3	Radio Frequency Electromagnetic Field Immunity Test				
	IEC61000-4-4	Electric High-Speed Transition Phenomenon/Burst Immunity Test

	IEC61000-4-6	High Frequency Conduction Immunity Test				
	IEC61000-4-11	Instantaneous Outage Immunity Test			Panasonic Testing Centre Panasonic Service Europe, a division of Panasonic Marketing Europe GmbH Winsbergring 15,22525 Hamburg,F.R.Germany	

Composition of peripheral equipment

<Precautions in using options>

Use options correctly after reading operation manuals of the options to better understand the precautions.

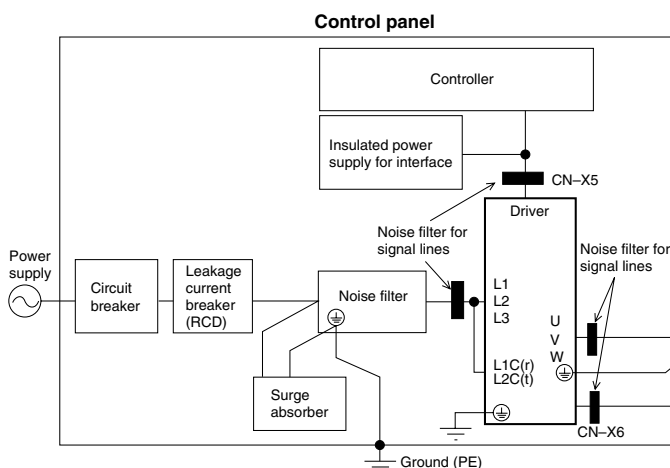

Take care not to apply excessive stress to each optional part.

Installation environment

Use the MINAS driver in environment of Pollution Degree

1 or 2 prescribed in IEC-60664-1

(e.g. Install the driver in control panel with IP54 protection structure.)

Power supply

100V system : Single phase 100V	+10% -15%	-115V	+10% -15%	50/60Hz
(Frame A to C)				
200V system : Single 200V	+10% -15%	-240V	+10% -15%	50/60Hz
(Frame A to B)				
200V system : Single/3- phase 200V	+10% -15%	-240V	+10% -15%	50/60Hz
(Frame C to D)				
200V system : 3- phase 200V	+10% -15%	-230V	+10% -15%	50/60Hz
(Frame E to G)				

- (1) This product is designed to be used under Overvoltage Category (Installation Category) II of EN50178 :1997. Install a surge absorber which conforms to EN61643-11 : 2002 and other relevant standards at the power entry when you want to use this product under Overvoltage Category (Installation Category) III.
- (2) For a interface power supply, use an insulated one with 12 to 24 VDC which conforms to CE Marking or EN Standards.

Circuit breaker

Connect a circuit breaker which conforms to IEC standards and is UL recognized (UL Listed,  marked), between the power supply and the noise filter.

Noise filter

When you install one noise filter in the power supply for multi-axes application, consult with the manufacture of the filter.

Option part No.	Part No.	Manufacturer
DV0P4170	SUP-EK5-ER-6	Okaya Electric Industries Co.
DV0P4180	3SUP-HQ10-ER-6	
DV0P4220	3SUP-HU30-ER-6	
DV0P3410	3SUP-HL50-ER-6B	

Surge absorber

Install a surge absorber at primary side of the noise filter.

Option part No.	Driver voltage spec	Part No.	Manufacturer
DV0P1450	3-phase, 200V	R · A · V-781BXZ-4	Okaya Electric

Option part No.	Driver voltage spec	Part No.	Manufacturer
DV0P4190	Single phase, 100V, 200V	R · A · V-781BWZ-4	Okaya Electric

<Remarks>

Remove this surge absorber when you perform dielectric test on the machine, or surge absorber might be damaged.

Conformity to CE and UL

Noise filter for signal lines

Install noise filters for signal lines to all cables (Power line, motor cable, encoder cable, interface cable)

Option part No.	Part No.	Qty.	Manufacturer
DV0P1460	ZCAT3035-1330	4	TDK Corp.

<Caution>

Fix the signal line noise filter in place to eliminate excessive stress to the cables.
(Refer to page A4-137 [Composition of peripheral equipment])

Ground-fault breaker

Install a B-type ground-fault breaker (RCD) at primary side of the power supply of the driver.

Grounding

- (1) Connect the protective earth terminal of the driver (⊕) and protective earth terminal of the control panel (PE) without fail to prevent electrical shocks.
- (2) Do not co-clamp to the protective earth terminals (⊕). Two protective earth terminals are provided.

Conformity to UL Standards

- Observe the following conditions of (1) and (2) to make the system conform to UL508C (File No. E164620).
- (1) Use the driver in an environment of Pollution Degree 2 or 1 prescribed in IEC60664-1. (e.g. Install in the control box with IP54 enclosure.)
 - (2) Install a circuit breaker or fuse which are UL recognized (LISTED  marked) between the power supply and the noise filter without fail.
- For the rated current of the circuit breaker or fuse, refer to P.A4-12, A4-38, A4-63, "List of recommended peripheral equipments".
Use a copper cable with temperature rating of 60°C or higher.
Tightening torque of more than the max. values (M4:1.2N·Em, M5: 2.0N·Em) may break the terminal block.

IP65 Rating

- MSMD, MQMA and MAMA motors conform to IP65 rating except for the connector and shaft through hole.
- For MSMA, MDMA, MGMA, MFMA and MHMA motors, customer to supply the plug and cable clamp which conform to IP65 rating.
(Optional connector kits for encoder cable and motor cable do not provide IP65 rating.)

Motor			(1) Receptacle connector (motor side) (or equivalent)	Plug and clamp (Customer to supply) manufactured by Japan Aviation Electronics Ind.				
Series	Output (kW)	Plug				(6) Cable clamp (or equivalent)		
		(2) Straight type (or equivalent)		(3) Angle (L) type (or equivalent)	Low profile type			
					(4) Plug connector	(5) Low profile type endbell

<Cautions>

- 1) Check the stamped pin-No. on the connector body while making a wiring.
- 2) For the function of each signal title or its symbol, refer to the wiring example of the connector CN I/F.
- 3) Check the stamped pin-No. on the connector body while making a wiring.

● MINAS A4P

Connector kit for motor and encoder

<Notification>

There may be cases where parts equivalent to those indicated by the part Nos. shown follow are used as components such as connectors, connector covers, straight plugs and cable clamps.

- **Applicable motor models :** MSMD 50W to 750W
MQMA 100W to 400W
MAMA 100W to 750W

17-bit absolute

For brake, purchase our optional brake cable.

1) Part No. **DV0P4290**

2) Components

Title	Part No.	Number	Manufacturer	Note
Connector	55100-0600 or 55100-0670 (lead-free)	1	Molex Inc.	For CN X6 (6-pins)
Connector	172161-1	1	Tyco Electronics AMP	For junction cable to encoder (9-pins)
Connector pin	170365-1	9		
Connector	172159-1	1	Tyco Electronics AMP	For junction cable to motor (4-pins)
Connector pin	170366-1	4		

3) Pin configuration of connector, CN X6

4) Pin configuration of junction cable for encoder

5) Pin configuration of junction cable for motor power

*When you connect the battery for absolute encoder, refer to A4-154,
"When you make your own cable for 17-bit absolute encoder"

- **Applicable motor models :** MSMD 50W to 750W
MQMA 100W to 400W
MAMA 100W to 750W

2500P/r incremental encoder

For brake, purchase our optional brake cable.

1) Part No. **DV0P4380**

2) Components

Title	Part No.	Number	Manufacturer	Note
Connector	55100-0600 or 55100-0670 (lead-free)	1	Molex Inc.	For CN X6 (6-pins)
Connector	172160-1	1	Tyco Electronics AMP	For junction cable to encoder (6-pins)
Connector pin	170365-1	6		
Connector	172159-1	1	Tyco Electronics AMP	For junction cable to encoder (4-pins)
Connector pin	170366-1	4		

3) Pin configuration of connector, CN X6

4) Pin configuration of junction cable for encoder

5) Pin configuration of junction cable for motor power

- **For DV0P2490, DV0P4380, recommended manual crimp tool**
(to be prepared by customer)

Title	Part No.	Manufacturer
For junction cable to encoder	755330 - 1	Tyco Electronics AMP
For junction cable to motor	755331 - 1	

Options

Pin configuration of connector CN X6 plug

- 1.Shown in the figure at right is the pin configuration as seen from the soldering side of the connector. Also check the pin No. inscribed on the case main body and take care to carry out wiring properly.
- 2.Be sure to connect to the case (FG) the shield of the shielded wire to be used.
- 3.For wiring and connecting, refer to pages A4-19, 45 and 71.

- Applicable motor models : MSMA 1.0kW to 2.0kW
MDMA 1.0kW to 2.0kW
MHMA 500W to 1.5kW
MGMA 900W

[17-bit absolute incremental encoder,
2500P/r incremental encoder]

Without brake

- Harmonic restraint on general-purpose inverter and servo driver

On September, 1994, Guidelines for harmonic restraint on heavy consumers who receive power through high voltage system or extra high voltage system and Guidelines for harmonic restraint on household electrical appliances and general-purpose articles established by the Agency for Natural Resources and Energy of the Ministry of Economy, Trade and Industry (the ex-Ministry of International Trade and Industry). According to those guidelines, the Japan Electrical Manufacturers Association (JEMA) have prepared technical documents (procedure to execute harmonic restraint: JEM-TR 198, JEM-TR 199 and JEM-TR 201) and have been requesting the users to understand the restraint and to cooperate with us. On January, 2004, it has been decided to exclude the general-purpose inverter and servo driver from the Guidelines for harmonic restraint on household electrical appliances and general-purpose articles". After that, the Guidelines for harmonic restraint on household electrical appliances and general-purpose articles was abolished on September 6, 2004.

We are pleased to inform you that the procedure to execute the harmonic restraint on general-purpose inverter and servo driver will be modified as follows.

1. All types of the general-purpose inverters and servo drivers used by specific users are under the control of the Guidelines for harmonic restraint on heavy consumers who receive power through high voltage system or extra high voltage system". The users who are required to apply the guidelines must calculate the equivalent capacity and harmonic current according to the guidelines and must take appropriate countermeasures if the harmonic current exceeds a limit value specified in a contract demand. (Refer to JEM-TR 210 and JEM-TR 225.)
2. The Guidelines for harmonic restraint on household electrical appliances and general-purpose articles was abolished on September 6, 2004. However, based on conventional guidelines, JEMA applies the technical documents JEM-TR 226 and JEM-TR 227 to any users who do not fit into the Guidelines for harmonic restraint on heavy consumers who receive power through high voltage system or extra high voltage system from a perspective on enlightenment on general harmonic restraint. The purpose of these guidelines is the execution of harmonic restraint at every device by a user as usual to the utmost extent.

<Remarks> When using a reactor, be sure to install one reactor to one servo driver.
